

Rebekah Dean

Tampa, FL | 813-519-2780 | Rdean.dev@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

Junior Software Engineer with two years of internship and web development experience, proficient in JavaScript, React, Python and object-oriented programming. Skilled in deploying and configuring systems, troubleshooting software issues and using Git for version control. Demonstrated ability to collaborate in team settings and eager to apply agile practices to design and debug mission-critical applications.

Education

University of South Florida

Bachelor of Science, Information Technology

Jun 2022 - Aug 2026

Tampa, FL

Experience

Bible Truth Ministries Academy

IT Support Intern

Aug 2023 - Aug 2025

- Deployed and configured over 80 Windows domain-joined computers using Active Directory and Group Policy in an agile environment, enabling staff to access network resources immediately
- Configured DNS filtering and enforced network security policies on Wi-Fi access points, reducing external threats and improving overall network security
- Diagnosed and resolved software and configuration issues across operating systems, applications, and network layers, restoring user productivity within hours

Summer Camp Counselor (Website Development Focus)

Jun 2022 - Jun 2024

- Taught website creation using Wix Learn to groups of 15+ students, incorporating HTML, CSS, and React fundamentals, enabling each camper to launch a functional personal site by the end of the program
- Provided one-on-one troubleshooting and UI support, fixing JavaScript bugs and improving page layouts, which allowed campers to complete their projects without delays

Projects

Stock Market Real-Time Simulation & Pattern Recognition System

<https://github.com/Rdean-dev/Stock-Market-Simulation>

- Designed and implemented a real-time financial market data simulation pipeline to ingest, process, and visualize time-series OHLC price data using interactive candlestick charts, applying object-oriented design principles
- Developed modular candlestick pattern-recognition components (Doji, Marubozu, etc.) to analyze price behavior and identify potential market signals
- Implemented configurable playback controls and evaluation logic to simulate varying market conditions
- Debugged data-flow, rendering, and state-management issues using Git for version control to improve performance and reliability

React Calculator App <https://github.com/Rdean-dev/Calculator>

- Developed a responsive calculator application using React (Vite), collaborating with Git in an Agile workflow and implementing chained operations, decimals, percentages, and error handling
- Implemented reusable computation logic and clean component structure.

Technical Skills

- **Programming Languages:** Python, JavaScript, C#, SQL
- **Software Development Concepts:** Data Structures, Object Oriented Programming (OOP), Version Control (Git), REST APIs, .NET
- **Web Technologies:** HTML, CSS, React, Visual Studio Code, Visual Studio
